May 18-21, 2015  Alexandria, Virginia, USA

It is our pleasure to invite you to participate in the 9th International Conference on Managing Pavement Assets (ICMPA9) that will take place in Washington, DC May 18-21, 2015. The conference will bring together pavement design and management engineers, consultants and companies specialized in pavement/asset data collection and pavement management services, researchers and specialists on asset/pavement management, planners dealing with the development of public works programs, and academia in pavement design, analysis and management.

The conference is aimed at defining the requirements of “next generation” pavement management by “moving pavement management beyond the short-term: embracing innovation and addressing sustainability, accountability, and improved performance.” A key goal of the conference is to fully engage pavement managers, practitioners and academia with best practices pertaining to effective and innovative data collection, analysis tools, performance-based investment strategies, sustainability, and approaches to managing pavements and support the needs to high-level decision makers.

The conference provides a unique forum to interact and network with colleagues from all over the world through activities such as an ice-breaking reception, an innovation-themed gala dinner at the U.S. Patent Office building and a technical program, which will include excellent keynote speakers and technical presentations.
